运行caffe官方提供的jupyter 的rcnn detection,总是出现各种问题。先将问题及方法汇集在此:

1. Selective Search 的安装问题

按照*官网*,我下载了selective_search_ijcv_with_python,但是在我的linux matlab2017a上总是出现问题,

`Error using CountVisualWordsIndex (line 21) First two input arguments should have the same 2D dimension Error in BlobStructColourHist Error in Image2HierarchicalGrouping (line 42) [colourHist blobSizes] = BlobStructColourHist(blobIndIm, colourIm); Error in demo (line 61) [boxe s blobIndIm blobBoxes hierarchy] = Image2HierarchicalGrouping(im, sigma, k, minSize, colorType, simFunctionHandles);`

于是我谷歌到了*https://github.com/nightrome/matconvnet-calvin/issues/18*,按照nightrome的方法下载*新的版本*,将其与官网合并,形成了最新的版本(见:链接: *https://pan.baidu.com/s/1bSoJim* 密码: 67rk),在matlab中使用demo,可以顺利运行。

2. 使用caffe运行python/detect.py,

报错信息: OSError: [Errno 2] No such file or directory

修改文件:~/caffe-master/python/selective_search_ijcv_with_python/selective_search.py

修改前:mc = "matlab -nojvm -r \"try; {}; catch; exit; end; exit\"".format(command)

修改后:mc = "/usr/local/MATLAB/R2014a/bin/matlab -nojvm -r \"try; {}; catch; exit; end;

exit\"".format(command)

3. 继续出错:

TypeError: slice indices must be integers or None or have an index method

主要原因是我安装的caffe时,使用了默认的anaconda安装的numpy(1.13),应该降级使用1.11,(参考: https://github.com/rbgirshick/py-faster-rcnn/issues/480)但是当我降级后,caffe不能用了,因此只能按照如下方法修改:

将140行前面加上: window=window.astype(np.int64)

即改为:

```
# Crop window from the image.
window=window.astype(np.int64)
crop = im[window[0]:window[2], window[1]:window[3]]
```

将175-179改成:

```
box=box.astype(np.int64)
  context_crop = im[box[0]:box[2], box[1]:box[3]]
  context_crop = caffe.io.resize_image(context_crop, (crop_h, crop_w))
  crop = np.ones(self.crop_dims, dtype=np.float32) * self.crop_mean
  crop[int(pad_y):int(pad_y + crop_h), int(pad_x):int(pad_x + crop_w)] = context_crop
```
